

Test Name

Upload an Image Asset to the Assets Library (DD)

Business Goal

Verify that a user can sign in, upload an image to the Assets area, and open the uploaded image record after the upload completes.

Application

DD

Preconditions

- User has a valid DD account with permission to access **Assets** and **Upload**.
- User has at least one image file available on their device for upload (e.g., JPG/PNG).
- Test environment is accessible: <https://dev.mirrix.app>
- User credentials are available (password is masked as *********).

Test Steps (numbered)

1. **Functional Description:** Navigate to the DD Login page.
 - **Expected Result:** The Login page displays and is ready for user authentication.
2. **Functional Description:** Log in to DD using valid credentials (password = *********).
 - **Expected Result:** User successfully signs in and gains access to the application.
3. **Functional Description:** Open the **Assets** area.
 - **Expected Result:** The Assets page displays, showing available assets and upload options.
4. **Functional Description:** Start the upload workflow from Assets.
 - **Expected Result:** The upload interface opens and prompts the user to select files and upload settings.
5. **Functional Description:** Choose to select files for upload.
 - **Expected Result:** A file selection dialog (or file picker) opens to allow the user to choose a file.
6. **Functional Description:** Select the **Default** upload configuration.
 - **Expected Result:** The Default configuration is applied/selected for the upload session.
7. **Functional Description:** Select **Images** as the asset type/category.
 - **Expected Result:** The upload is configured for image files and image-related fields/options display.
8. **Functional Description:** Proceed to the asset details step.
 - **Expected Result:** The asset details form displays and is ready for data entry.
9. **Functional Description:** Enter required asset information in the provided fields.
 - **Expected Result:** All required fields are populated and the form indicates it is valid/ready to submit.
10. **Functional Description:** Submit the upload.
 - **Expected Result:** Upload starts and the system shows an in-progress status (e.g., "Waiting..." or similar).
11. **Functional Description:** Monitor the upload status until completion.

- **Expected Result:** Upload status transitions from in-progress (e.g., “Waiting...”) to **Completed** without errors.

12. **Functional Description:** Open the uploaded image asset record (e.g., “IMG_142524”).

- **Expected Result:** The selected uploaded image asset opens and displays its details/preview successfully.

13. **Functional Description:** Complete any final confirmation/actions on the asset record screen.

- **Expected Result:** Final action(s) complete successfully and the asset remains available in the Assets library.

Postconditions

- The image asset is uploaded and visible in the Assets library.

- The uploaded asset record can be opened and reviewed.
