

Test Name

Image Upload and Verification Workflow

Business Goal

To validate the end-to-end image upload process ensuring users can successfully select, upload, label, and verify image assets within the STEP / OPIL UI application.

Application

Stockmann STEP / OPIL UI

Preconditions

- The user must have valid login credentials.
- The user is not currently logged in.
- The application environment is accessible and operational.

Test Steps

1. Navigate to the login page.
 - The login screen is displayed allowing user authentication.
 - Expected Result: Login page loads successfully with username and password fields available.
2. Perform user login by submitting valid credentials.
 - The system authenticates the user and grants access.
 - Expected Result: Successful login redirects the user to the main assets page.
3. Navigate to the Assets section of the application.
 - The asset management area is displayed to the user.
 - Expected Result: Assets page loads with options to manage image files.
4. Initiate the image upload process by selecting the "Upload" option.
 - The upload interface opens to allow file selection.
 - Expected Result: Upload dialog or screen opens providing file upload controls.
5. Choose files to upload by accessing the file selection interface.
 - The user is prompted to select image files from a default source and then filtered to show only images.
 - Expected Result: File selector displays with default location and image filter applied.
6. Enter the desired label or name for the image as "Test_image."
 - The input accepts the label and displays the updated name dynamically with characters entered sequentially.
 - Expected Result: The input field reflects the full label "Test_image" with each keystroke accepted correctly.
7. Confirm the upload by activating the upload command.
 - The system processes the image file upload asynchronously, displaying progress indicators.
 - Expected Result: Upload initiates, showing a "Waiting..." status followed by a "Completed" confirmation once upload succeeds.
8. Verify that the uploaded image named "IMG_142524" is available and accessible in the

assets list.

- The image is listed and selectable confirming successful storage.
- Expected Result: Uploaded image appears in the asset list and can be opened/viewed without errors.

9. Perform further interactions with the uploaded image as applicable.

- Additional operations (clicks) on the image and related UI elements occur to validate UI responsiveness and functionality.
- Expected Result: UI responds appropriately to user actions, confirming system stability and usability post-upload.

Postconditions

- The user remains logged in with the new image asset uploaded and available for further use.
- The asset repository contains the newly uploaded and labeled image accessible for subsequent workflows.

Traceability Mapping

Functional Step	Source Step ID(s)
Navigate to login page	39
Submit login credentials and login	40
Navigate to assets section	41
Initiate image upload	43
Select files to upload (default location & image filter)	44, 45, 46, 47
Enter image label "Test_image"	48 to 66
Confirm and initiate upload	67 to 73
Verify uploaded image presence	75
Additional interactions with uploaded image	77, 79, 80
